

PETE'S PLUG II®

The successor to the real Pete's Plug

**PETE'S PLUG II® WILL ALLOW YOU TO TAKE
PRESSURE OR TEMPERATURE
READINGS—QUICKLY AND ELIMINATE THE
NEED FOR LEAVING COSTLY GAUGES OR
TEMPERATURE INDICATORS ON THE LINE.**

Depending on the application, the Pete's Plug can be operated to a maximum of 500 PSIG and 200°F or 275°F for neoprene or norden respectively. Maximum working pressures of 1000 PSIG can be attained with neoprene or norden at temperatures from 140°F to -20°F.

The enhanced version of Pete's Plug II® is still the only pressure and temperature test plug with two self-closing valves, but the valves are improved with interaction which speeds valve closure.

Pressure or temperature tests

Take pressure and temperature readings quickly with line pressurized. Reduce the need for costly permanent installation of gauges and recorders on the line.

How to operate

The Pete's Plug II is permanently installed in the line at recommended test points. The cap protects the valve and provides an additional seal. After the cap has been removed, either a test thermometer or a gauge adapter with the proper pressure gauge can be inserted through the two, self-closing valves in the Pete's Plug II. Readings are made, adjustments or tests can be accomplished and when the probes are withdrawn the two valves close. The protective cap is then reinstalled. Tests should be made as quickly as possible since the valve reseal time is dependent upon time of insertion, temperature and pressure. Slower valve reseal can be expected at lower temperature and lower pressures.

Pete's Plug II® is available in various pipe thread sizes, lengths and materials to satisfy each application. The XL series Pete's Plug II will allow you to insulate the test point and not completely cover the Pete's Plug II. The XL Pete's Plug II eliminates extra fittings for insulated applications.

Cross section:

- 1 - Cap and gasket
- 2 - Cap retaining strap
- 3 - Two self closing valves with interaction to speed valve closure
- 4 - Valve body
- 5 - Valve retainer

Standard length Pete's Plug II

Suggested specifications

Pressure and temperature test stations:

Supply and install where indicated "Pete's Plug II"® a 1/4" MPT fitting to receive either a temperature or pressure probe 1/8" OD. Fitting shall be solid brass with two valve cores of Neoprene (Max 200°F) at 500 PSI, or Norderl (Max 275°F) at 500 PSI, fitted with a color coded cap strap with gasket, and shall be rated at 1000 PSIG at 140°F.

In addition, the installing contractor shall supply the owner with ____ (number) pressure gauge adapters with 1/8" OD probe and ____ (number) five-inch stem pocket testing thermometers; 25-125°F for chilled water and ____ (number) 0-220°F or ____ (number) 50-500°F for hot water.

Pressure and temperature test kit:

Supply and present to the owner upon completion of testing (quantity) pressure and temperature test kit consisting of a 0-100 PSI, 0-230 ft. of water pressure gauge with No. 500 gauge adapter attached, a 25-125°F pocket testing thermometer, a 0-220°F pocket testing thermometer, a No. 500 gauge adapter, and a protective carrying case.

Applications

In general the Pete's Plug II is a time and money saving device which is well suited for most plant and pipeline systems and is designed to eliminate gauge cocks and thermometer wells. Hot and chilled water systems, heat exchangers, pumps, differential readings, air and gas lines and numerous other applications are only a few of the areas where the Pete's Plug II's are presently being used.

Pressure test

The pressure gauge adapter has a probe constructed of 304 stainless steel. The probe is 0.156" in diameter and extends 2 inches on the standard adapter and 3½ inches on the extra long adapter. the ⅛" diameter probe is less likely to become clogged with foreign material and resists bending. Also, the ⅛" diameter probe operates in either the ¼", ⅜", or ½" Pete's Plug II. Please note that the 500XL gauge adapter will operate in any of the Pete's Plug II's. It is intended for use with the XL Pete's Plug II.

Temperature tests

The test thermometer is constructed of stainless steel, has a 1¾-inch dial and has a bi-metallic sensing element. Accuracy within ½% over the entire scale can be expected. Pointer adjustment or recalibrations can be made by turning the hex nut on the back of the dial case while firmly holding the dial case. The stem should be immersed in a know, controlled temperature bath. Stem lengths are 5", and diameters of 0.156" or 4mm are maximum diameters that can be inserted into the Pete's Plug II. Digital thermometers have the same specifications but can not be recalibrated in the field.

XL Plugs

Valve materials

Neoprene is a chloroprene based synthetic rubber and is resistant to deterioration from waxes, fats, oils, greases, petroleum products and most refrigerants.

Test thermometers

1¾-inch dial or digital
5-inch probe
0.156 max. diameter
Protective cover

Nordel is an ethylene—propylene based synthetic rubber and gives excellent service in hot or cold water and in some applications of low steam. Nordel is resistant to detergents, phosphate esters, ketones, alcohols and glycols. It is *not* suitable for petroleum products.

Neoprene and nordel are proprietary materials and the information presented herein is believed to be accurate and reliable. Peterson Equipment Co. Inc., can assume no liability for results obtained or damages incurred through the application of this information. The information is intended as a guide and if in doubt—ask!
