B838 Series Regulator

Twin Parallel Flow Service Regulators

The B838 series regulators are designed for commercial and industrial applications. The twin unit concept provides excellent control of widely varying inlet pressures and fluctuating flow rates. With the twin internal relief valves and internal monitor available, these regulators have unmatched over pressure protection, while providing significant cost savings from expensive piping and relief valve sets.

Description

B838N – A spring loaded self operated regulator with no internal relief. This regulator can be used on low or intermediate inlet pressures where an internal relief valve is not required.

B838R – The largest internal relief service regulator. This model features twin 2-1/2" internal relief vents that allow the B838R to be used on any inlet system up to the regulator's maximum operating pressure rating.

B838IMN – Equipped with an internal monitor (IM) orifice that operates upon failure of the main valve. This orifice features the safety advantage of a second gas-tight lock-up seat if the primary valve seat fails to produce the adjusted outlet pressure. The monitor also controls gas flow between the failed open flow and no flow, thereby providing complete secondary regulation. The "N" designation signifies no internal relief valve.

B838IMR – Equipped with an internal monitor (IM) orifice as a primary form of overpressure protection that operates

upon failure of the main valve seat. The B8381IMR is also equipped with secondary twin internal relief valves that open in the event that both the main seat and the internal monitor cannot function.

B838IMRV – Equipped with an internal monitor (IM) orifice as a primary form of overpressure protection that operates upon failure of the main valve. It is also equipped with the vent-hole option, which gives a warning indication that the regulator is on monitor control in the event of main valve failure. The vent-hole option consists of a 1/16" hole in the sliding orifice that allows a small amount of gas to bleed downstream, which causes the relief valves to weep gas. In the unlikely event the main valve and the monitor valve fails to function, the B531IMRV is equipped with secondary or back-up twin internal relief valves.

Option Designations

N	No internal relief
R	Internal Relief
IMN	Internal monitor without internal relief
IMR	Internal monitor with internal relief
IMRV	Internal monitor with internal vent

Benefits

- » Eliminates parallel regulator piping installations
- » Light weight
- » Fast response protects equipment from shock damage
- » Field inspection of the internal monitor and internal relief valves without customer shut-off or by-pass
- » Unmatched overpressure protection with internal monitor plus internal relief options

Features

- » Interchangeable brass orifice
- » Combined 226 in 2 of diaphragm area
- » Twin Spring-loaded internal relief valve assemblies
- » Field interchangeable adjustment springs
- » No special adjustment tools required
- » Controlled size breather orifice eliminates pulsation and provides normal actuation at low flows
- » Wide range of valve body sizes

SHIPPING WEIGHT

One regulator per box

Size	Box weight
2" x 2" NPT	57 lbs.
2" x 2" Flanged	59 lbs.
2" x 3" Flanged	70 lbs.
2" x 4" Flanged	80 lbs.

 For outlet pressure <1 PSIG: varies

Other available options Seal wire to indicate unapproved tampering

1/8" pipe plug tap on upstream side of valve body

CONSTRUCTION

Itron takes pride in delivering American made products with the utmost concern for safety, quality, and customer satisfaction.

Material construction

Valve bodies	High tensile strength cast iron (ASTM A-126, Class A)
Orifices	Brass
Valve seats	Buna-N
Valve stems	Nylon
Lever pins	Stainless steel (type 303)
Levers	Zinc and dichromate plated steel (AISI C1010)
Upper diaphragm plates	Zinc and dichromate plated steel (14-gauge steel)
Lower diaphragm plates	Die cast aluminum (ASTM B-85 Alloy SC84A)
Diaphragms	Buna-N reinforcing fiber
Vent valves/seats	Neoprene
Vent screen	Stainless steel (16 mesh)
Adjustment ferrules	Acetal
Seal caps	ABS plastic
Diaphragm cases	Die cast aluminum (ASTM B85 - Alloy SC84A)
Valve stem inserts	Acetal

VALVE BODY SIZES

Inlet	Outlet	NPT	Flanged
2"	2"	X	X
2"	3"		X
2"	4"		X

X-indicates the valve body is available in that configuration.

CORRECTION FACTORS FOR NON-NATURAL GAS APPLICATIONS

The B838 may be used to control gases other than natural gas. To determine the capacity for gases other than natural gas, multiply the values within the capacity tables by a correction factor. The table below lists the correction factors for some of the more common gases:

Gas Type	Specific Gravity	Correction Factor (CF)
Air	1.00	0.77
Butane	2.01	0.55
Carbon Dioxide (Dry)	1.52	0.63
Carbon Monoxide (Dry)	0.97	0.79
Natural Gas	0.60	1.00
Nitrogen	0.97	0.79
Propane	1.53	0.63
Propane-Air-Mix	1.20	0.71

To calculate the correction factor for gases not listed in the table above, use the gases' specific gravity and insert it in the formula listed below:

$$\text{Correction Factor (CF)} = \sqrt{\frac{SG_1}{SG_2}}$$

Where:

SG₁ = Specific gravity of the gas in which the capacity is published.

SG₂ = Specific gravity of the gas to be controlled.

Wide Open Flow Calculations

For wide-open orifice flow calculations use the following equations:

$$\text{For } P_1/P_2 < 1.89 \text{ use: } Q = K\sqrt{P_2(P_1 - P_2)} \quad \text{For } P_1/P_2 > 1.89 \text{ use: } Q = \frac{KP_1}{2}$$

Where: P₁ = Absolute Inlet Pressure (PSIA)

P₂ = Absolute Outlet Pressure (PSIA)

Q = Flow Rate (SCFH)

K = Orifice Coefficient (SCFH/PSI)

K-factors are wide open.

A. Normal regulation

B. Normal lock-up

C. Dual monitor operation - internal foreign material failure

D. Single monitor operation - full internal diaphragm case failure

E. Total lock-up

PRINCIPLE OF OPERATION

A. Normal regulation. The internal monitor orifice operates like a standard one-piece orifice, performing normal regulation.

B. Normal lock-up. The regulator is free to lock-up in the usual manner. The O-ring seal prevents gas from leaking past the orifice exterior into the downstream or low pressure side of the valve body.

C. Dual monitor operation - internal foreign material failure. If the regulator fails to lock-up for any reason, the internal monitor orifice automatically goes into operation. Outlet pressure increases slightly, causing the valve seat to push against the inner or sliding part of the orifice gradually compressing the monitor spring and closing the secondary or monitor orifice on the inlet side of the sliding orifices. At this point, the B-838-IM functions as a monitor regulator. For example, assume a weld bead is caught between the orifice and the valve seat while the regulator is in high-flow operation. If the flow reduces, the valve tries to close but can't due to the foreign matter. The outlet pressure increases approximately 2" w.c. above the original set point which starts to close the secondary monitor orifice. If the gas demand is decreased, the monitor orifice will partially close and become the new operating orifice. The new orifice will function as a monitor regulator and keep the outlet pressure approximately 3" above the set pressure on inches water column, or .8 PSIG when set for PSIG outlet. If the flow becomes further reduced to no-flow, then the sliding orifice (or orifices) close against the secondary rubber seat providing a complete no-gas flow with a total outlet pressure build up of only 6" w.c. above the original set point.

D. Single monitor operation - one full internal diaphragm case failure. If the diaphragm case is damaged on one side of the piping such that the lever and valve seat cannot move to close against the orifice face, the outlet pressure builds (as described in C) on the good regulator and its sliding orifice moves to contact the non-movable failed orifice monitor seat. Closing or lock-up will be restricted according to flow demand. Since only one diaphragm is in operation, the outlet overpressure will be approximately 4" w.c. higher on single monitor operation than normal regulation set.

E. Total lock-up. If the demand for gas downstream of regulator is zero, the sliding orifice (or orifices) will close against the secondary rubber monitor seat and lock-up the gas flow completely.

B838 IMR PERFORMANCE CURVES

7" w.c. Set Point

Type and model	B838 IMR
Inlet size	2" NPT
Outlet size	2" NPT
Orifice size	3/4"
Spring range	Green/white
Position	Horizontal

All test results are reported at a base of 14.7 PSIA at 60° F and with 0.6 S.G. gas.

2 PSIG Set Point

Type and model	B838 IMR
Inlet size	2" NPT
Outlet size	2" NPT
Vent size	

All test results are reported at a base of 14.7 PSIA at 60° F and with 0.6 S.G. gas.

5 PSIG Set Point

Type and model	B838 IMR
Inlet size	2" NPT
Outlet size	2" NPT
Orifice size	3/4"
Spring range	Red
Position	Horizontal

All test results are reported at a base of 14.7 PSIA at 60° F and with 0.6 S.G. gas.

B838 IMR MONITOR CURVES¹

7" w.c. Set Point²

Type and model	B838 IMR
Inlet size	2" NPT
Outlet size	2" NPT
Inlet pressure	20 PSIG @ set
Orifice size	5/8"
Spring range	Green/White
Position	A
Loading ring set @	27°

Curves:

- A 10 PSIG - W.O.R.
- B 20 PSIG - SET
- C 40 PSIG - W.O.R.

2 PSIG Set Point²

Type and model	B838 IMR
Inlet size	2" NPT
Outlet size	2" NPT
Inlet pressure	20 PSIG @ set
Orifice size	5/8"
Spring range	Silver
Position	A
Loading ring set @	0°

Curves:

- A 10 PSIG - W.O.R.
- B 20 PSIG - SET
- C 40 PSIG - W.O.R.

5 PSIG Set Point²

Type and model	B838 IMR
Inlet size	2" NPT
Outlet size	2" NPT
Inlet pressure	20 PSIG @ set
Orifice size	5/8"
Spring range	Red
Position	A
Loading ring set @	0°

Curves:

- A 10 PSIG - W.O.R.
- B 20 PSIG - SET
- C 40 PSIG - W.O.R.

¹ .125 diameter rod glued to one valve seat.

² One regulator blocked wide open.

B838 IMR RELIEF VALVE CHARACTERISTICS¹

7" w.c. Set Point

2 PSIG Set Point

5 PSIG Set Point

Vented flow - SCFH x 1000

Inlet Pressure - PSIG

¹ One valve seat blocked wide open per orifice size and foreign particle wedged between monitor sealing surfaces.

ASSEMBLY POSITIONS

The six basic assembly positions are shown here.

Please specify the required position by letter designation when ordering.

PARTS LIST

B838 R Twin Parallel Flow Regulator

B838 N Twin Parallel Flow Regulator

Item No.	Part No.	Quantity Required per Regulator Model							Description
		RD	RM	D	M	R	N

INTERNAL MONITOR ORIFICE ASSEMBLY PARTS LISTS

3/8" and 1/2" Orifice Components

Item No.	Description	Part No.
1	Stationary orifice	758437
2A	3/8" Sliding orifice (male)	758471
2B	3/8" Sliding orifice with vent hole (male)	758474
2A	1/2" sliding orifice (male)	758477
2B	1/2" Sliding orifice with vent hole (male)	758480
3	3/8" Sliding orifice (female)	759151
3	1/2" Sliding orifice (female)	759153
4	Cut - off spring (red)	762451
5	O-ring	765531
6	O-ring	765525

Note: components are interchangeable.

5/8" and 3/4" Orifice Components

Item No.	Description	Part No.
1	Stationary orifice	758434
2A	5/8" Sliding orifice (male)	758484
2B	5/8" Sliding orifice with vent hole (male)	758487
2A	3/4" Sliding orifice (male)	758490
2B	3/4" Sliding orifice with vent hole (male)	758493
3	5/8" Sliding orifice (female)	759155
3	3/4" Sliding orifice (female)	759157
4	Cut - off spring (blue)	762453
5	O-ring	765533
6	O-ring	765525

Note: components are interchangeable.

1" Orifice Components

Item No.	Description	Part No.
1	Stationary orifice	758431
2A	1" Sliding orifice (male)	758497
2B	1" Sliding orifice w vent hole (male)	758498
3	1" Sliding orifice (female)	759159
4	Cut - off spring (yellow)	762455
5	O-ring	765523
6	O-ring	765525

IMN and IMR Orifice Assembly - Complete

Item No.	Description	Part No.
58A	3/4" diameter	759161
	3/4" diameter	759165
	3/4" diameter	759171
	3/4" diameter	759175
	1" diameter	759181

IMRV Orifice Assembly - Complete

Item	Description	Part No.
58B	3/4" diameter	759163
	1/2" diameter	759167
	3/4" diameter	759173
	3/4" diameter	759177
	1" diameter	759183

Note: 1" components are not interchangeable with other sizes.

Special Tools

Description	Part No.
Machined orifice wrench	799027
Adjustment wrench	799055
Seal wire, no lead, 24	80002002

Notes:

- B838 IMN parts are identical to B838N parts except for the orifice assembly.
- B838 IMR parts are identical to B838R parts except for the orifice assembly.
- B838 IMRV parts are identical to B838R parts except for the orifice assembly.

Torque Specifications

Retainer Plate Screws	100 in. lbs.
Orifice	600 in. lbs.
Orifice (IM)	300 in. lbs.
Margin screws (item no.648)	50 in. lbs.
Margin screws (item no. 64A)	30 in. lbs.

VENT LINES FOR REGULATORS

When constructing vent lines to be attached to regulators installed indoors, follow a few basic rules:

- Never use pipe sizes smaller than the vent size; smaller pipe sizes restrict the gas flow. If a long gas run must be used, Itron advises increasing the pipe one nominal size every ten feet to keep the flow restriction as low as possible.
- Keep the vent line length as short as possible to minimize the restriction and reduce the vent's tendency to cause regulator pulsation.
- Support the vent pipe to eliminate strain on the regulator diaphragm case.
- Always point outdoor vent pipes in the downward position to reduce the possibility of rain, snow, sleet, and other moisture entering the pipe. Install a bug screen in the end of the pipe.
- Do not locate the vent line terminus near windows, fans, or other ventilation equipment. See the installation instructions furnished with the regulator.
- Adhere to all applicable codes and regulations.
- If your vent pipe causes regulator pulsation, consult your sales representative or manufacturer.
- Itron strongly recommends running a separate vent line for each regulator. Headers with various installed devices can cause regulator malfunction.

Caution Ensure the end of the vent line is away from ANY potential ignition sources. It is the installer's responsibility to ensure the vent line is exhausting to a safe environment.

INSTALLATION

Warning Itron does not endorse or warrant the completeness or accuracy of any third party regulator installation procedures or practices, unless otherwise provided in writing by Itron. Follow your company's standard operating procedures regarding the use of personal protection equipment (PPE). Adhere to guidelines issued by your company in addition to those given in this document when installing regulators.

- a. Remove all shipping plugs from the regulator inlet, outlet, and vent before installation.
- b. Verify the piping interior and regulator inlet and outlet are clean and free of dirt, pipe dope, and other debris. Dirt and other foreign materials entering the regulator can cause a loss of pressure control.
- c. Apply pipe joint sealant to the male pipe threads. Do not use pipe joint material on the regulator's female threads. Joint sealant could become lodged in the regulator and cause a loss of pressure control.
- d. Gas must flow through the regulator's valve body in the direction cast on the regulator body. Gas flowing in the wrong direction can overpressure and cause damage to the regulator.
- e. The diaphragm casing can be mounted in any position relative to the body through a full 360° angle at 90° increments.
- f. When the regulator is installed OUTDOORS, the vent must always be positioned so that rain, snow, moisture or foreign particles cannot enter the vent opening. Itron recommends positioning the vent downward to avoid entry of water or other matter which could interfere with the proper operation of the regulator. The vent should be located away from building eaves, window openings, building air intakes and above the expected snow level at the site. The vent opening should be inspected periodically to insure it does not become blocked by foreign material as outlined in DOT PHMSA-RSPA-2004-19856.
- g. When the regulator is installed INDOORS, the vent must be piped to the outside atmosphere using the shortest length of pipe, the fewest possible pipe elbows, and a pipe diameter as large as the vent size or larger. USING VENT PIPE SMALLER THAN THE VENT CONNECTION LIMITS THE REGULATOR'S INTERNAL RELIEF VALVE CAPACITY. The outlet end of the pipe must be protected from moisture and the entrance of foreign particles. The regulator should be specified by the user with the size vent and pipe threads desired to make the vent pipe connection.

START-UP AND ADJUSTMENT

Warning The seal caps for the main diaphragm cases must always be installed and wrench tight before introducing gas flow to the regulator and for as long as gas pressure is present in the regulator.

- a. Mount a pressure gauge downstream of the regulator to monitor the downstream pressure.
- b. With the downstream pressure valve closed, slowly open the inlet valve. The outlet pressure should rise to slightly more than the set-point. Verify there are no leaks and all connections are tight.
- c. The regulator was pre-set at the factory to match order specifications. If regulator readjustments are necessary, the adjustment is made to the springs only. While the regulator is under steady flow conditions of 500 cfm or more, remove the regulator seal caps.

Caution Never remove or loosen main diaphragm case seal caps while gas is present, under pressure, in the regulator.

- d. To increase outlet pressure, turn each adjustment screw clockwise in equal increments until the outlet pressure is about 10% below desired gauge pressure. Adjust one screw clockwise to desired outlet pressure. Turn the second screw clockwise until a slight increase in outlet pressure is observed. Make slight counter-clockwise adjustments to achieve the desired outlet pressure. Both springs should always be set at the same pressure to keep both valves operating in unison.
- e. To decrease outlet pressure, turn each adjustment screw counterclockwise in equal increments until the outlet pressure is about 10% below desired outlet pressure. Adjust one screw clockwise to desired outlet pressure. Turn the second screw clockwise until a slight increase in outlet pressure is observed. Make slight counter-clockwise adjustments to achieve the desired outlet pressure. Both adjustment screws should always be set at the same pressure to keep both valves operating in unison.
- f. Replace the seal cap and check for leaks after the desired outlet pressure is achieved.

The regulator is ready for operation.

SAFETY WARNING

This product, as of the date of manufacture, is designed and tested to conform to all governmental and industry safety standards as they may apply to the manufacturer. The purchaser/user of this product must comply with all fire control, building codes, and other safety regulations governing the application, installation, operation, and general use of this regulator to avoid leaking gas hazards resulting from improper installation, startup or use of this product.

Itron strongly recommends installation by a qualified professional and periodic inspection of pressure regulators (inspections may be required by local applicable codes or regulations).

Inspections should include checking for gas quality, cycle numbers, external environmental changes, and operating conditions that impact wear on the regulator's moving parts. To ensure safe and efficient operation of this product, replace worn or damaged parts found during inspection.

Limited Warranty

Itron, Inc. 970 Highway 127 North, Owenton, Kentucky 40359-9302, warrants this gas product against defects in materials and workmanship for the earlier of one (1) year from the date the product is shipped by Itron or a period of one year from the date the product is installed by Itron at the original purchaser's site. During such one-year period, provided that the original purchaser continues to own the product, Itron will, at its sole option, repair any defects, replace the product or repay the purchase price.

» This warranty will be void if the purchaser fails to observe the procedures for installation, operation or service of the product as set forth in the Operating Manual and Specifications for the product or if the defect is caused by tampering, physical abuse or misuse of the product.

» ITRON SPECIFICALLY DISCLAIMS ALL IMPLIED WARRANTIES INCLUDING THOSE OF MERCHANTABILITY OR OF FITNESS FOR A PARTICULAR PURPOSE. UNDER NO CIRCUMSTANCES WILL ITRON BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES OF ANY KIND WHATSOEVER.

» Itron's liability for any claim of any kind, including negligence and breach of warranty for the sale and use of any product covered by or furnished, shall in no case exceed the price allocable to the product or part thereof which gives rise to the claim.

» In the event of a malfunction of the product, consult your Itron Service Representative or Itron Inc., 970 Highway 127 North, Owenton, Kentucky 40359-9302. See Itron Terms and Conditions of Sale for the full and complete terms of the Limited Warranty.

Ordering Information

Specify:

1. Inlet and Outlet Connection Size and Type
2. Model Number
3. Outlet pressure desired
4. Pilot needed
5. Inlet pressure range
6. Type of gas and maximum capacity required
7. Assembly position number (see chart below)
8. Special requirements such as tagging, 1/8" pipe plug tap, seal wire, etc.

At Itron, we're dedicated to delivering end-to-end smart grid and smart distribution solutions to electric, gas and water utilities around the globe. Our company is the world's leading provider of smart metering, data collection and utility software systems, with over 8,000 utilities worldwide relying on our technology to optimize the delivery and use of energy and water.

To realize your smarter energy and water future, start here: www.itron.com
