

Badger Meter

M-Series® M2000

Electromagnetic Flow Meter Detector

DESCRIPTION

The Badger Meter M-Series® model M2000 detector is the result of years of research and field use of electromagnetic flow meter technology. Based on Faraday's law of induction, these meters can measure almost any liquid, slurry, or paste that has minimum electrical conductivity.

Designed, developed, and manufactured under strict quality standards, the M-Series meter features sophisticated, processor-based signal conversion with accuracies of ± 0.25 percent. The wide selection of liner and electrode materials helps ensure maximum compatibility and minimum maintenance over a long operating period.

OPERATION

The flow meter is a stainless steel tube lined with a non-conductive material. Outside the tube, two DC powered electromagnetic coils are positioned opposing each other. Perpendicular to these coils, two electrodes are inserted into the flow tube. Energized coils create a magnetic field across the whole diameter of the pipe.

As a conductive fluid flows through the magnetic field, a voltage is induced across the electrodes. This voltage is proportional to the average flow velocity of the fluid and is measured by the two electrodes. This induced voltage is then amplified and processed digitally by the converter to produce an accurate analog or digital signal. The signal can then be used to indicate flow rate and totalization or to communicate to remote sensors and controllers.

With no moving parts in the flow stream, there is no pressure lost. Also, accuracy is not affected by temperature, pressure, viscosity, density or flow profile. There is practically no maintenance required.

APPLICATION

The M2000 has many advantages over other conventional technologies. It can be used in a majority of industrial flow applications. The M2000 meter can accurately measure fluid flow—whether the fluid is water or a highly corrosive liquid, very viscous, contains a moderate amount of solids, or requires special handling. Today, magnetic meters are successfully used in industries including food and beverage, pharmaceutical, water and wastewater, and chemical.

ELECTRODES

When looking from the end of the meter into the inside bore, the two measuring electrodes are positioned at three o'clock and nine o'clock. M2000 mag meters have an "empty pipe detection" feature. This is accomplished with a third electrode positioned in the meter between twelve o'clock and one o'clock.

If this electrode is not covered by fluid for a minimum five-second duration, the meter will display an "empty pipe detection" condition, send out an error message if desired, and stop measuring to maintain accuracy. When the electrode again becomes covered with fluid, the error message will disappear and the meter will continue measuring.

As an option to using grounding rings, a grounding electrode (fourth electrode) can be built into the meter during manufacturing to assure proper grounding. The position of this electrode is at five o'clock.

FEATURES

- Pulsed DC magnetic field for zero point stability
- Corrosion resistant liners for long life
- Calibrated in state-of-the art facilities
- Optional grounding rings or grounding electrode
- Measurement largely independent of flow profile
- NSF listed
- Integral and remote signal converter availability
- Available in sizes 0.25...54" (6...1400 mm)

SPECIFICATIONS

Flow Range	0.1...39.4 ft/s (0.03...12 m/s)	Pipe Spool Material	316 stainless steel
Min. Conductivity	≥ 5 micromhos/cm	Meter Housing Material	Carbon steel welded
Accuracy	± 0.2 percent of rate for velocities greater than 1.64 ft/s (0.50 m/s), ± 0.0032 ft/s (± 1 mm/s) for velocities less than 1.64 ft/s (0.50 m/s)	Flanges	Standard: ANSI B16.5 Class 150 RF cast steel Optional: 300 lb cast steel, 316 stainless steel
Electrode Materials	Standard: Alloy C Optional: 316 stainless steel, gold/platinum plated, tantalum, platinum/rhodium	Meter Enclosure Classification	NEMA 4X (IP66) Optional: Submersible NEMA 6P (IP67), remote amplifier required
Liner Material	PFA up to 3/8", PTFE 1/2...24", soft and hard rubber from 1...54" Halar® from 14...40"	Junction Box Enclosure Protection	For remote amplifier option: Powder coated die-cast aluminum, NEMA 4 (IP66)
NSF Listed	Models with hard rubber liner 4" size and up; PTFE liner, all sizes.	Cable Entries	1/2" NPT Cord Grip
Fluid Temperature	With Remote Amplifier: PFA, PTFE & Halar 302° F (150° C) With Meter Mounted Amplifier: Rubber 178° F, (80° C), PFA, PTFE & Halar 212° F (100° C), Rubber 178° F, (80° C)	Optional Stainless Steel Grounding Rings	Meter Size Up through 10 inches 12...54"
			Thickness (of one ring) 0.135" 0.187"
